

St Catharines Forklift Training School

St Catharines Forklift Training School - Forklift Training School - For The Safety Of Both The Machinery And The User - CSA and OSHA establish criteria for forklift safety training that meets current regulations and standards. Anybody planning to operate a forklift is required to successfully complete safety training before using any type of forklift. The accredited Forklift Operator Training Program is intended to offer trainees with the practical skills and information to become an operator of a forklift.

There are forklift operation safety regulations which must be followed pertaining to pre-shift checks, and regulations for loading and lifting.

Prior to a shift starting, an inspection checklist has to be done and submitted to the Supervisor or Instructor. If any maintenance issue is discovered, the equipment must not be used until the issue is dealt with. To be able to indicate the equipment is out of order, the keys should be removed from the ignition and a warning tag placed in a spot that is visible.

Loading safety regulations include checking the forklift nameplate's rating capacity and knowing if the weight of the load falls within capacity. The forklift forks should be in the down position when the forklift is starting up. Don't forget that there is a loss of around 100 pounds carrying capacity for every inch further away from the carriage which the load is carried.

To safely lift a palletized load, drive the forklift to the pallet and halt with the fork three inches from the load. Level the mast until it is at right angles to the load. Lift the forks to one inch below the slot on the pallet and drive forward. Afterward lift forks four inches. Tilt back the load to be able to secure it for moving. Drive the lift backwards if the load obscures frontal vision. Check behind and honk in order to warn other staff. Do not allow forks to drag on the ground.
