

## St Catharines Boom Lift Training

St Catharines Boom Lift Training - Elevated work platforms, likewise known as aerial platforms, allow workers to perform jobs at heights which would otherwise be unreachable. There are various types of lifts designed for various site conditions and applications. If carelessly operated, elevated work platforms can cause serious injury or fatality. The most common causes of related accidents are falls, electrocution, crushed body parts and tip-overs. Lift operators should be trained completely in procedures to prevent accidents during the operation of lifts.

The Aerial Lift Safety program provides required resources to be able to help people needing to learn how to operate these devices more effectively. Through the course, participants would receive thorough instruction. Kinds of lift covered comprise scissor, articulating and boom supported aerial lifts. The video presents the proper methods operators must follow. Instruction focuses on pre-operational inspection, protection against falls, stability of the device and safe driving procedures.

The boom lift training program will help to deal with employee safety and equipment reliability, using materials which are completely compliant with your regional and local requirements and regulations. Training methods and course management would be taught. The trainer will also know the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program consist of both classroom training and practical training. Both sessions must be successfully completed for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms could be positioned entirely beyond the base of the machine. The theoretical training part is virtually the same for both kinds. The practical part of the training could be finished faster if only one type of equipment is utilized.

### Elevating Work Platform Training Program Objectives:

For safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators make use of their machinery more effectively and would decrease the possibilities of accidents in the workplace. Trainees would review of applicable regulations and business policies, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, supervisors and employees. Participants will review equipment features, operating procedures, stability, parking and fueling/charging procedures. Site-specific safety matters will be addressed.
