

St Catharines Manlift Training

St Catharines Manlift Training - There are a lot of manlift training programs which provide a review of the manlift machine. The practicum part of the training is one more important portion of the course. In this part the trainee has chance to show their practical abilities, their ability to safely operate a manlift. A prerequisite to Manlift training is the fall protection training, which can be incorporated in the training based on the specific requirements of the client.

Course Content

The program comprises the following areas of instruction: pre-shift equipment inspection and work area survey requirements; the effect of doing unsafe acts or operating unsafe equipment, Lifting device machine definitions, Review of load capabilities, the particular machine requirements and safety decals, Review of related sections of the OSHA Standards and the CSA Standards and Review site particular Hazards, together with controls for safe use of a lifting device.

Demonstration and Evaluation Content

Demonstration and evaluation content comprises: Using a signaler or a spotter when needed; Proper personal protective equipment or also referred to as P.P.E. as needed; Using the proper fitting harness or fall arrest device; Using a lift just on solid and level ground; Aware of load limits etc. and other specs set out by the manufacturer; Operating the lift with all other employees clear of the job place; Pre-shift work area survey and equipment check; Having all associated machinery stored safely on the lift platform; Ensuring a safe and smooth operating speed for various plant conditions and isolating off the work area when major work projects are to be done.

Each individual would be tested to make sure they could safely and efficiently utilize your site-specific equipment.

Manlift Safety

Because the manlift is capable of lifting personnel and materials over 20 feet in the air, these machines pose a particular amount of risk and can be dangerous machinery if not utilized correctly. Since the danger is so apparent, lift owners and operators are careful to correctly maintain their equipment and follow correct safety precautions and operating procedures. The ratio of accidents involving this specific machinery is rather low.

The safety specifications for boom lifts and scissor lifts puts the burden for safe manlift operation on the user. You are responsible for knowing how to safely operate the lift even if you just rent the machine for a day. The most basic safety features on the equipment are safety decals and the operating guidebook. These show important information about the operating procedures, safety machines and maintenance.

Newer lift models will come along with guidebooks and decals in place. Technically, the operating handbook should be kept on the lift itself. If you are buying a used lift, it is important to ensure that the instruction booklet is included and that vital decals haven't been painted over. The restraints that prevent operators from falling and the guardrails are other vital safety features. These are standard and mandatory on all types of lifts.
